

With the BFK•Learn™ solution, district and school leaders can facilitate and support differentiated professional learning.

Just as teachers attempt to differentiate their instruction, education leaders need efficient ways to personalize, monitor and deliver professional growth opportunities for their staff.

Using the BFK•Learn™ solution, districts can:

- Provide staff with access to online courses
- Personalize staff learning experiences
- Efficiently assign, monitor and manage professional learning
- Assist individuals and teams in creating meaningful goals, action plans and timelines

What is BFK•Learn™?

The BFK•Learn solution is Battelle for Kids' online learning management system that provides educators access to online courses and personalized learning paths available any time, any place and at any pace.

Using this solution, leaders can efficiently and effectively build the capacity of large, diverse user groups on a variety of school-improvement issues.

Online Courses

Districts can subscribe to an online suite of **value-added** and **formative instruction courses**. Written for educators by educators, these courses are designed to provide users with an interactive and content-rich learning experience. Districts also can integrate their own professional development content to create customized learning experiences for staff.

Learning Paths

Learning paths provide users with a suggested course of study to guide their learning journey. Whether a beginner or more advanced user, learning paths provide suggestions for individual or team-based activities. Educators can take advantage of the suggested learning paths or customize learning paths to align with their professional development plans.

Manage the Online Learning Experience

The BFK•Learn solution is designed to empower leaders to assign, monitor and manage their staff's professional learning experience in a district or building. With this solution, instructional leaders can oversee staff learning, enroll staff in activities, implement Professional Learning Teams, set target completion dates, send e-mail alerts and more.

BFK•Focus™

Also available through this solution is the BFK•Focus™ process. This data-based, goal-setting instructional improvement process is designed for educators to use student performance data to examine their results, investigate the factors that are contributing to these results and chart their way toward more effective teaching and learning practices.
