

Efficiently Manage the Planning Process and Data Collection for Student Learning Objectives (SLOs)

Developed with teacher and administrator feedback, our online solution helps school systems efficiently manage the Student Learning Objectives (SLOs) process and has upload functionality into eTPES.

Student Learning Objectives (SLOs) can provide powerful information to accelerate student learning and inform professional practice. However, the process to develop and submit the student growth plan and collect and track data can become time consuming if not well managed.

WITH BKF-GROW™, YOU CAN:

Create and submit student growth measure plans for review, adjustment, and approval

Verify rosters and enter baseline data and growth targets

Monitor, intervene, and update growth plans and rosters throughout the year

Enter final data and automatically determine if growth targets were met; results can be uploaded into eTPES

BKF-Grow™ has a similar look, feel, and navigation as BKF-Link® (roster verification), enabling an efficient system-wide approach to managing student growth measure plans and data.

BKF-GROW™:

- ✓ Maximizes time and resources through an automated, configurable online tool
- ✓ Promotes data accuracy
- ✓ Fosters ongoing conversations about the use of student growth measures
- ✓ Builds a culture of collaboration, transparency, and trust through the creation of rigorous, attainable, and appropriate student growth measures

“BKF-GROW™ IS A POWERFUL TOOL THAT HAS STREAMLINED THE IMPORTANT WORK OF WRITING [STUDENT LEARNING OBJECTIVES] AND PROVIDING MEANINGFUL AND TIMELY FEEDBACK TO TEACHERS IN A DYNAMIC PLATFORM.”

—Kelly Holbrook, Assistant Superintendent, Heath City Schools
