## Student feedback provides essential information to support educator practice

**Research indicates that “hope is a better predictor of ongoing [college] enrollment and graduation than [ACT scores].”**

— Shane J. Lopez, Ph. D.,  
Gallup Senior Scientist and  
author of *Making Hope Happen*

### The Student Experience™ Survey

- Designed for students in grades 4-12.
- Taken online through a computer or handheld device in less than 15 minutes, preserving valuable instructional time.
- Timely, actionable feedback for educators at the classroom level.
- Important complement to existing measures.

Battelle for Kids

Battelle for Kids, in collaboration with Gallup®, has developed **The Student Experience™ Survey** to provide educators with a more comprehensive picture of what matters to student success now and in the future. The survey captures student feedback at the classroom level around four key themes:

- **Classroom Hope:** The ideas and energy students have for the future.
- **Classroom Engagement:** Students’ involvement in and enthusiasm for learning.
- **Classroom Belonging:** Students feel cared for and respected.
- **Classroom Management:** A classroom that is conducive to learning.

Survey items are based on years of Gallup research around hope and engagement. The items also measure select educator standards from across the country for creating a classroom environment that fosters learning and student well-being. Input from teachers and students was used to enhance the development of the survey.

The Student Experience™ Survey provides a flexible local administration option and can be administered multiple times during the school year to provide teachers with timely and actionable feedback to support educational improvement. Formative reports are provided in real time as a tool for teachers to personally reflect and grow as they consider their own professional learning goals. Results can also be used as a summative measure that may be combined with other measures to provide a more comprehensive picture of learning and teaching. Schools have the ability to produce survey reports at the classroom, building, or district levels.

**No single measure can capture the complexity of teaching and learning, but there is evidence that student feedback, when combined with other measures, can be a powerful tool to inform teacher practice and improve outcomes for students.**
